

One intake. Four clear routes.

Day 08 tests whether a small customer request queue can stay predictable without guessing when the input is unclear.

The question

When a request arrives, can the system show the type, urgency, owner, and next action - and visibly stop at REVIEW when the input is missing, unsupported, or ambiguous?

Known inputs route. Unclear inputs remain inspectable.

The routing rules are public.

The product has no hidden scoring model. Each supported type maps to an explicit owner and next action.

BILLING

Billing Queue
Verify billing context.

TECHNICAL

Support Queue
Reproduce and confirm scope.

SALES

Sales Queue
Qualify and schedule discovery.

GENERAL

Customer Ops
Clarify and route the confirmed need.

Anything else → REVIEW

Missing type, unsupported type, ambiguous type, missing urgency, or unsupported urgency. The reason stays visible.

Every item shows the decision.

The visible state carries the exact fields needed to inspect why the request is routed - or why it is not.

Type

Normalized known type or original unresolved input

Urgency

HIGH / NORMAL / LOW or unresolved input

Owner

Assigned queue or Unassigned

Next action

Explicit action or review-before-routing

Status

ROUTED or REVIEW

Reason

Required when the item is in REVIEW

Unresolved means REVIEW.

The router does not invent a confident answer just to keep the queue looking clean.

REQ-086 → REVIEW

Type input: Billing / Technical
Urgency: HIGH
Owner: Unassigned
Reason: ambiguous request type.

REQ-088 → REVIEW

Type input: Technical
Urgency input: Immediate
Owner: Unassigned
Reason: unsupported urgency.

Fail closed

A cleaner-looking queue is not worth fabricating a route. REVIEW is an explicit product state, not an error to hide.

The screen is simple. The test is bigger.

This small app is the visible test object. UBuildOS is being tested on the full path around it.

UBUILDOS DAY 08

Customer Request Router™

Known requests route predictably. Unclear requests stay visible as REVIEW with a reason.

8 requests

4 routed

4 review

REQ-081

ROUTED

Invoice total does not match purchase order

TYPE	URGENCY
BILLING	HIGH
OWNER	NEXT ACTION
Billing Queue	Verify billing context and prepare a response.

REQ-082

ROUTED

CSV import stops on the third row

TYPE	URGENCY
TECHNICAL	NORMAL
OWNER	NEXT ACTION
Support Queue	Reproduce the reported issue and confirm scope.

REQ-083

ROUTED

Need pricing for a five-person pilot

TYPE	URGENCY
SALES	NORMAL
OWNER	NEXT ACTION
Sales Queue	Qualify the request and schedule discovery if appropriate.

REQ-084

ROUTED

Where can I find the setup guide?

TYPE	URGENCY
GENERAL	LOW
OWNER	NEXT ACTION
Customer Ops	Clarify the request and route the confirmed need.

REQ-085

REVIEW

Proposal for a referral partnership

TYPE	URGENCY
Partnership	NORMAL
OWNER	NEXT ACTION
Unassigned	Review the input before routing.

Why REVIEW: Unsupported request type: Partnership.

REQ-086

REVIEW

Charged twice after an error screen

TYPE	URGENCY
Billing / Technical	HIGH
OWNER	NEXT ACTION
Unassigned	Review the input before routing.

Why REVIEW: Ambiguous request type: BILLING + TECHNICAL.

REQ-087

REVIEW

Please call me about my account

TYPE	URGENCY
Missing	LOW
OWNER	NEXT ACTION
Unassigned	Review the input before routing.

Why REVIEW: Missing request type.

REQ-088

REVIEW

Login page shows an unexpected message

TYPE	URGENCY
TECHNICAL	Immediate
OWNER	NEXT ACTION
Unassigned	Review the input before routing.

Why REVIEW: Unsupported urgency: Immediate.

BRAIZ Works / UBuildOS / Customer Request Router™

Rendered candidate snapshot + synthetic data

Build → inspect → test → independently verify → publish → read back → close with an exact record

What Day 08 proves - and what it does not.

A narrow public proof of deterministic request routing and visible fail-closed handling.

PROVES

- 4 known request types route deterministically.
- Missing / unsupported / ambiguous inputs become REVIEW.
- Type, urgency, owner and next action stay visible.
- Current visible state can be exported.

DOES NOT CLAIM

- Live CRM or ticketing integrations.
- Autonomous external actions.
- Production customer data.
- Business outcomes, production scale, market demand, or superiority.

COPY THE ROUTING PATTERN

Make the supported routes explicit. Make uncertainty visible. Export the exact state you can inspect.
